Leading the industry with sustainability

Viña Errázuriz is one of the first Chilean wineries to earn the certification of sustainability granted by Vinos de Chile and the Vinnova-Tecnovid Consortium, demonstrating yet again how its wines are not only of a very high quality, but also faithfully reflect the terroir of the Valle de Aconcagua with concern for the environment and its community.

The certification affirms that Viña Errázuriz complies with a series of requirements in its lands located throughout the Valle de Aconcagua and makes it one of the first Chilean wineries to obtain this certification. Among the primary requirements, Viña Errázuriz stands out for the measurement of its water and carbon footprints, precision agriculture with vigor photographs, and erosion control.

During 2012 Wines of Chile and Vinnova-Tecnovid consortium will begin to certify the work in the wineries, in which Viña Errázuriz's sustainable icon winery will be crucial. This is a state of art facility where the top quality wines are vinified: Don Maximiano Founder's Reserve, Seña, Viñedo Chadwick, Kai y La Cumbre.

Sustainable practices Don Maximiano Icon Winery

- Gravity Flow instead of pumps to move the wine.
- Temperature Control with wind in underground ducts to avoid use of air conditioning.
- Solar panels and special window glass to save energy.
